2. Definition	
2.1 Quality Standards for the Parts: <ul style="list-style-type: none"> - Parts must all comply with AEC Q - IEC standards - EU-Directives 2002/95/EG(RoHS Directive) and (WEEE Directive) 	
2.2 Packaging Guidelines: <ul style="list-style-type: none"> - ESD standard must be complied with according to the specifications - If the supplier delivers products that are susceptible to electrostatic discharge (ESD), the supplier must have an active ESD program and special ESD processing and packaging procedures, whereby the packaging of such goods must be designed to meet ESD protection requirements. This applies to printed circuit boards, electronic components with exposed components or connections and other devices that require ESD protection. The supplier is obliged to keep records of tests and training measures carried out. - The handling and transportation of the goods must always be carried out carefully in all process phases and, if necessary, protected with aids according to their sensitivity. - In addition to the necessary ESD protective measures, the supplier shall generally use packaging that prevents contamination, corrosion or damage during handling or transportation of the goods.
